

Directions to Make a Basic Paper Rocket

1. Roll a single piece of paper around the PVC Tube **WITHOUT** putting any tape on the plastic tube.

2. Apply tape along the entire seam of the paper **WITHOUT** getting any tape on the plastic tube.

3. Slide the paper tube up about $\frac{1}{2}$ " and fold over the top edges to seal the end of the tube. Crisscross tape over the folded end to seal it shut.

4. Create a circle, cut a slit to the center and twist it into a cone. Tape the seam and fit it to the top of the rocket. Trim and tape securely.

5. Determine how many fins, what size, how firm, etc... and secure the fins to the back end of the rocket.

6. Remove the PVC tube to launch
